

SAFETY SERVICES

Advanced Respiratory Training Program

This two-day training program consists of classroom training session, participant evaluation and is followed by a practical operating evaluation specific to your company’s needs.

Respiratory hazards exist in every workplace, from bacteria, aerosols, gases and dust. Exposures to respiratory hazards can cause chronic and acute lung diseases, allergic reactions, irritations, cancers and systemic poisoning of the major organs in the body. This course provides information on identifying respiratory hazards, and the selection and use of appropriate respiratory protection.

Individuals teaching respiratory protection or acting as a Program Administrators would be encouraged to participant in this training.

This program will provide the participant with the necessary knowledge and skills in:

- History of respiratory protection
 - Increasing Dead space volume
 - Respiration control
 - Instantaneous Air Flow Rates
- Respiratory hazards
 - Oxygen Deficiency Physiological Standpoint
 - Particulate Contaminants Physiological Classification
 - Gaseous Chemical Physiological Classification
 - Systemic Poisons
 - Contaminant concentrations
- Selection, Care and Use of Respirators based on CSA 94.4-11
- Practical use of respirators
- Fit test instruction and practice
